Boffa Miskell Technical Directors Appointed

02 June 2010

Boffa Miskell is pleased to announce appointments to two newly created roles within the company – Sarah Dawson as Director::Planning and Stephen Fuller as Director::Science and Technology.

Rachel de Lambert was appointed **Director::Design** last November.

The three Technical Director roles have been created to provide leadership in Boffa Miskell's core threads of client service; design, planning, and science and technology.

These threads interweave across all the company's work, as Boffa Miskell Managing Director Don Miskell explains.

"We're here to provide long-term solutions for our clients – enduring solutions for the environment and for their business. That long-term view requires an integrated approach. We consciously recognise that design, planning, science and technological applications are inter-related and span across the environmental challenges of our clients projects.

"Sarah, Rachel and Stephen will be providing leadership in ensuring consistently high standards throughout the company and optimising clients' access to Boffa Miskell's considerable collective knowledge and skills. They know that high standards and innovation are grounded in experience, in which Boffa Miskell is richly endowed. They will be working with all our people to reflect on completed projects and constantly look for ways to do better."

Sarah Dawson

Sarah is a widely respected planner who joined Boffa Miskell as a Principal Planner in 1996. She has been a Director of the company since 1998. Sarah has extensive experience in statutory and environmental planning / resource management, environmental assessment and policy analysis. She is recognised for her work with multi-disciplinary teams on complex environmental assessments.

"I am delighted to take on this new role within the company – to be one of the three new technical directors working to strengthen our core services whilst ensuring that they integrate smoothly across the company.

"A wide range of people within Boffa Miskell work together to provide our planning services. As well as our diverse planning skills, we bring expertise in landscape planning, ecology, urban design and digital technology. This breadth across the company is, I believe, a strength – it stimulates the integrative thinking required to understand that no planning project exists in isolation. I am looking forward to us all working collaboratively alongside our clients and colleagues, towards planning solutions that are innovative and yet effective."

Stephen Fuller

Stephen joined Boffa Miskell in 2002 as a senior ecologist. He has been a Principal of the company since 2006 and, in 2010, became Associate Director. Stephen is a generalist ecologist working across the various ecological disciplines as well as working around the country, supporting and drawing on the skills of the ecology teams in each of the offices.

His appointment reflects the importance that Boffa Miskell places on the quality of its environmental investigations; on robust methodologies, analysis and interpretation; on knowledge sharing; and on the efficient use of technology to support and grow the work we do.

“It’s fantastic to have a chance to champion science and technology at the company level and to work with, and learn from, my fellow directors as we promote a ‘one-company’ integrated approach to the work we do,” Stephen says. “I see many opportunities to extend the current limits of our environmental investigations, through fully utilising the tools we already have, and through using tantalising new technologies that are on the horizon – there are exciting times ahead.”
